

Excess

(File handling, Unix ioctl)

Write a program which is similar to the standard unix utility more.

- Read a text file.
- Write the first page of the file into the stdout.
- If the file is longer the subsequent pages are printed after hitting return.
- If 'b' and return are entered, go back one page and print this page
- A page is defined by the number of lines the terminal displays

For getting the number of lines of the terminal examine the attached file test_ioctl.c.
